

Amphenol Pcd is pleased to announce the reintroduction of a classic design - **Industrial/Audio Relay Sockets**. Originally designed and produced by Amphenol's Chicago division, Amphenol Pcd has brought back this connector due to popular demand.

Amphenol Pcd's Industrial/Audio Relay Sockets provides a low cost, high quality solution for customers looking to maximize the life cycle of their existing product architectures.

Made with black phenol plastic and stamped alloy contacts, Amphenol Pcd's Industrial/Audio Relay Sockets meet existing dimensional and performance specifications. Typical applications are home security, door & gate openers, industrial automation, thermostats and lighting using "unsealed" relays, such as TE Connectivity's[™] Schrack MT Series Multimode Relays and TE Connectivity's Potter & Brumfield KRPA General Purpose Relays. Audio applications are high-end audio amplifiers, guitar amplifiers, electronic organs and speakers from Mcintosh[™], Marshall[™], Hammond[™] and Bogner[™], and using vacuum tube amplifiers, pre-amplifiers and rectifiers from Western Electric[™], Sovtech[™], Philips[™] and Siemens[™].

Amphenol Pcd's Industrial/Audio Relay Socket product offering consists of a number of standard sockets, including retainer ring mounted and molded-in-plate (MIP) styles. Also available are shielded, as well as termination screw-type sockets. Standard plugs are in development.
