1. When ordering, please specify **packaging** code:

### CST2010-200LD

**Packaging:** D = 13" machine-ready reel. EIA-481 embossed plastic tape (300 parts per full reel).

B = Less than full reel. In an effort to simplify our part numbering system, Coilcraft is eliminating the need for multiple packaging codes. When ordering, simply change the last letter of your part number from B to D.

2. Inductance measured between secondary pins at 1 kHz, 0.1 Vrms, 0 Adc.  
 3. Maximum volt-time product is for the secondary, based on 2000 Gauss.  
 4. Primary current of 47 A causes approximately  $40^{\circ}\text{C}$  temperature rise from  $25^{\circ}\text{C}$  ambient. Higher current causes a greater temperature rise (see Temperature Rise vs Current curve).  
 5. Terminating resistance ( $R_T$ ) value is based on 1 Volt output with 40 Amps flowing through the primary. Varying terminating resistance increases or decreases output Voltage/Ampere according to the following equation:  

$$R_T = V_{out} \times N_{sec} / I_{in}$$
