

LSP05GI Module Series

Description

Littelfuse's LSP05GI thermally protected Surge Protective Device is a self-protected device specially designed to be used in outdoor and commercial LED lighting fixtures for transient overvoltage protection. It has been developed with Littelfuse's thermally protected varistor technology. Its built-in thermal disconnect function provides additional protection to prevent catastrophic failure and fire hazard even under extreme circumstances of varistor end-of-life or sustaining over voltage conditions.

The LSP05GI features a built-in LED indicator that notifies when replacement of the module is needed.

Glossary:

1. MCOV/ U_c : Maximum Continuous Operating Voltage - maximum r.m.s. voltage that could be continuously applied to the SPD.
2. Maximum Discharge Current I_{max} (A): The maximum discharge current is a measure of the SPDs maximum capability; single impulse of discharge current uses the 8/20 μ s current waveform. All Devices pass maximum discharge current with possible, safe opening of thermal disconnect.
3. Nominal Discharge Current I_n (A): The nominal discharge current is a measure of the SPDs endurance capability; 15 impulses of discharge current uses the 8/20 μ s current waveform.
4. MLV: UL1449 Measured limiting voltage; the highest value of residual voltage measurements during the application of impulses of 8/20 μ s nominal discharge current (I_n); an average voltage value of 15 impulses.
5. U_p : IEC 61643-11 Voltage protection level; the highest value of residual voltage measurements during the application of impulses of 8/20 μ s nominal discharge current (I_n); a rounding voltage value of maximum measurement.
