Handling Instructions

The Piezo MEMS microphone is very robust to harsh environments such as dust and moisture. However, to avoid mechanical damage to the microphone, we recommend using appropriate handling procedures when manually handling the parts. The following guidelines will help to avoid damage:

- Do not apply a vacuum to the bottom side of the microphone. A vacuum pen may be used with care on the top side only.
- Do not apply very high air pressure over the sound port hole.
- Do not insert any large particles or objects in the sound port hole. The microphone is resistant to small particles per IP5X specification.
- Do not expose the sound port to harsh chemicals.
