

General Description

The MAX14736/MAX14737 evaluation kit (EV kit) is a fully assembled and tested circuit board that demonstrates the precision, ultra-fast, low quiescent current overvoltage-protection devices. The EV kit features an LED power OK (POK) reading. The EV kit comes with the MAX14736EWL+ or MAX14737EWL+ installed. Please indicate the part number when ordering.

Features

- 2.1V to 5.5V Operating Voltage Range
- Power Ok (POK) LED Reading
- Proven PCB Layout
- Fully Assembled and Tested

EV Kit Contents

- EV Kit board containing a MAX14736/MAX14737

Ordering Information appears at end of data sheet.

Table 1. Enable Input Jumper Settings (JU1)

JUMPER	SHUNT POSITION	DESCRIPTION
JU1	Installed	$\overline{\text{EN}}/\text{EN}$ is pulled down to ground. (MAX14736: enable, MAX14737: disable)
	Not installed	$\overline{\text{EN}}/\text{EN}$ is pulled up to IN. (MAX14736: disable, MAX14737: enable)

Quick Start

Required Equipment

- MAX14736/MAX14737 EV kit
- 10V DC power supply
- Multimeter

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Verify that jumper JU1 is installed for the MAX14736 and not installed for the MAX14737.
- 2) Apply 2.1V to IN. Verify that OUT is at 2.1V and that the LED1 is on.
- 3) Slowly increase IN and verify that the OUT voltage is the same as IN. When IN reaches ~4.7V (for MAX14736) or ~5.2V (for MAX14737), the switch turns off, the OUT voltage goes down, and the LED1 is off. Do not apply a voltage higher than 5.5V to IN.
- 4) Slowly decrease IN. When IN reaches ~4.6V (for MAX14736) or ~5.1V (for MAX14737), switch turns on, OUT voltage is same as IN, and LED1 is on.

Detailed Description

The MAX14736/MAX14737 EV kit is a fully assembled and tested circuit board demonstrating these overvoltage-protection devices in a 9-bump wafer-level package (WLP).

The MAX14736 has a 4.7V (typ) precision overvoltage threshold, while the overvoltage threshold for the MAX14737 is 5.2V (typ). The MAX14736 has an active-low enable pin ($\overline{\text{EN}}$), while the enable pin (EN) on the MAX14737 is active-high.

LED Indicator

The EV kit features LED1 to indicate POK output.

Enable Input

Use JU1 to enable/disable the device (see [Table 1](#) for jumper settings).

Ordering Information

PART	TYPE	OVLO (V)
MAX14736EVKIT#	EVKIT	4.7
MAX14737EVKIT#	EVKIT	5.2

#Denotes RoHS compliant.
