

## Features

- Operates 1.94 to 2.24 GHz
- Low Amplitude Ripple
- Linear Phase
- 50 Ohm nominal impedance
- Continuously Variable Across a Full 360 degree range
- Test Boards Available
- 4x6 mm PQFN Package

## Description

M/A-COM's SA90-0001 is a Vector Modulator that significantly reduces the required board space compared to hybrid solutions. The monolithic passive elements will lead to greater repeatability lot-to-lot. Low amplitude ripple will provide superior performance. High intercept and compression points will contribute to more linear system performance. SA90-0001 is ideally suited for wireless infrastructure applications.

M/A-COM's MADRCC0002 Dual Linearizer is designed to simplify the control of Vector Modulators. See Figure 1 and App Note AN3001.

## Ordering Information

| Part Number      | Package           |
|------------------|-------------------|
| SA90-0001        | Bulk Packaging    |
| SA90-0001TR      | 1000 piece reel   |
| SA90-0001--DC000 | Sample Test Board |

Note: Reference Application Note M513 for reel size information.

## Functional Schematic

## Pin Configuration

1. Noise figure is approximately equal to the absolute attenuation.

**Absolute Maximum Ratings<sup>2,3</sup>**

| Parameter                                               | Absolute Maximum   |
|---------------------------------------------------------|--------------------|
| Max. Input Power<br>1.5 to 2.0 GHz<br>Other Frequencies | +34 dBm<br>+24 dBm |
| DC Voltages <sup>4</sup><br>$V_{bias1}$ or $V_{bias2}$  | +1.0V              |
| DC Current                                              | 50 mA Max per Bias |
| Operating Temperature                                   | -40°C to +85°C     |
| Storage Temperature                                     | -65°C to +125°C    |

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM does not recommend sustained operation near these survivability limits.
- Note that external dropping resistors are required to limit the current and voltage on the PIN diodes.

**Phase and Attenuation of SA90-0001, Vector Modulator Linearized with  
MADRCC0002 Dual Linearizer<sup>5,6,7,8</sup>**

**Figure 1A**

**Figure 1B**

5. Tic marks on x,y axes refer to reflection coefficient in increments of 0.1V. Reflection coefficients vary from -0.5 to +0.5 on both the x and y axes.
6. Data is for vector modulators driven by linearizers per attached schematic.
7. Inputs to the linearizers vary from 0 to 5V.
8. The phase with the inputs to both linearizers set to +5V is arbitrarily called zero degrees.

## Phase and Attenuation of SA90-0001 vs. Bias Current<sup>9,10</sup>

Figure 2A

Figure 2B

9. Tic marks on x,y axes refer to reflection coefficient in increments of 0.1. Reflection coefficients vary from -0.6 to +0.6 on both the x and y axes.  
10. The phase with the inputs to both linearizers set to +15mA is arbitrarily called zero degrees.

Rev. V6

### Handling Procedures

Please observe the following precautions to avoid damage:

### Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

### Moisture Sensitivity

The MSL rating for this part is defined as Level 2 per IPC/JEDEC J-STD-020. Parts shall be stored and/or baked as required for MSL Level 2 parts.
